

## Medical Applications

15<sup>th</sup> June 2021

To Whom It May Concern:

Silicones are often used in medical applications; however, the grade and extent to which silicones can be used in medical environments is reliant on more than just the materials used. Production processes, production environments, packaging and other activities that take place after the materials leave our warehouse could all potentially affect the suitability of the final product.

Because our manufacturing practices follow ISO 9001 certifications, Silex can guarantee several materials will be suitable for most specifications.

Our sales team can advise when, and to what extent. Our silicones can meet USP Class VI, ISO 10993 or other highly specified certifications for either the medical or the pharma sectors. Please feel free to contact us.

For and on behalf of Silex Limited.
